

To my fellow New England Chapter members,

My name is Alexia Romano and I am interested in running for President for the Society of Nuclear Medicine and Molecular Imaging for the New England Chapter Technologist section. I am a graduate of Rhode Island College and currently work as a PET-CT technologist for a private PET-CT mobile company, New England PET Imaging, in New Hampshire and Massachusetts. Prior to New England PET, I was a Nuclear Medicine Technologist at Massachusetts General Hospital.

I attended the SNMMI-TS Leadership Academy in 2023. This opportunity motivated me to become involved and give back to my profession. Leadership Academy also gave me the tools to lead and collaborate with others to better the experience of being an SNMMI member. I am currently the Secretary on the NECTS Executive Board. In my time as a secretary, I have gained even more of an ambition to be involved in my professional society, as well as encourage others to do the same.

I enjoy gathering the knowledge and opinions of other technologists and students to find creative ways to make involvement with our society a great experience.

My goal as President would be to preserve our knowledge from seasoned members, while sharing new and innovative ideas to motivate the younger generation of technologists and students to help create the best experience within our local chapter. I am very eager for an opportunity to serve as President within the NECTS Executive Board and use this position to further my experience and lay a foundation for involvement within the national chapter.

Sincerely,
Alexia Romano
